- 4. Affected waterbody:** Unnamed Tributary to Clear Creek
- 5. Project Description:** The applicant proposes to upgrade the existing dam and outlet structure to meet current DNR Dam Safety regulations. In order to do so the applicant must increase the spillway outlet, raise the embankment 4 inches, provide hard armoring in the outlet channel, remove trees on the dam, and relocate the outlet channel away from the toe of the dam. As part of the project approximately 174 linear feet of stream channel will be relocated away from the toe of the dam and a new channel will be constructed approximately 118 linear feet in length. The new channel will receive a discharge of riprap from the outlet structure downstream approximately 81 linear feet. It is proposed to plant trees and shrubs on the south side of the stream channel upon completion of the project.

The request for a hearing should be submitted within the comment period to be considered timely.
